

ANUSHRAYA DAS

Associate Data Scientist | GenAI & RAG Systems | Python · SQL · FastAPI · Machine Learning

Bhubaneswar, Odisha, India | +91 7008754891 | anushrayadas@gmail.com | linkedin.com/in/anushraya-das-4578a92a6

PROFESSIONAL SUMMARY

Associate Data Scientist with 1+ year of experience designing and deploying GenAI/LLM-powered applications, RAG pipelines, and production-grade REST APIs using Python, SQL, and FastAPI. Skilled in predictive modeling, clustering & segmentation, feature engineering, schema discovery, and statistical analysis (A/B testing), with hands-on exposure to Azure OpenAI and AWS S3 for GenAI integration. Delivered semantic search, query-driven segmentation workflows, and Power BI dashboarding solutions for healthcare/pharma analytics that reduced manual effort and improved stakeholder reporting turnaround by ~50%. Seeking Data Scientist, Applied AI Engineer, GenAI Engineer, or ML Engineer roles at product and analytics companies.

EDUCATION

- ITER, SOA University, Bhubaneswar | CGPA: 7.45 | 2021 – 2025
- 12th Grade DAV Higher Secondary School, Thermal, Talcher, Angul, Odisha Percentage: 73% | 2019-2021
- 10th Grade Saraswati Shishu Vidya Mandir, Talcher, Angul Percentage: 68.33% Percentage: 68% | Year - 2019

TECHNICAL SKILLS

Languages: Python, SQL, Java, C

GenAI & NLP: LLMs, RAG, LangChain, Hugging Face Transformers, OpenAI API, Azure OpenAI (hands-on exposure), Prompt Engineering, Semantic Search, Vector Databases (Qdrant, Chroma)

Machine Learning: Scikit-learn, XGBoost, Predictive Modeling, Clustering & Segmentation, Feature Engineering, Schema Discovery, Data Profiling, Anomaly Detection, Model Evaluation, EDA, Statistical Analysis

Frameworks & Libraries: FastAPI, REST APIs, Streamlit, Pandas, NumPy, Matplotlib, Seaborn, Plotly

Databases & Cloud: PostgreSQL, MySQL, AWS S3 (hands-on exposure)

Analytics & BI: A/B Testing, Power BI Dashboarding, ETL/ELT, Data Cleaning & Standardization, Validation Pipelines, Business Insights, MLOps Basics

Tools: Git, GitHub, Jupyter Notebook, VS Code, Postman

PROFESSIONAL EXPERIENCE

Associate Data Scientist — InvoLead Aug 2025 – Present | India

- Build and maintain scalable FastAPI backend APIs for two enterprise GenAI platforms (Segmentation AI, Classification AI), integrating LLM-powered features, RAG-based semantic search, streaming responses, authentication, and user management.
- Design and deploy LangChain-based RAG pipelines with a Qdrant vector database and apply prompt engineering to improve LLM output accuracy, enabling semantic search and context-aware Q&A across two production GenAI platforms.
- Develop and maintain 3+ Power BI dashboards with business-aligned KPIs, cutting stakeholder reporting turnaround by ~50% through optimized data transformation pipelines.
- Build SQL-based ETL pipelines and data validation workflows supporting AI-driven analytics across HCP, prescription, and market intelligence datasets for pharma-domain research.
- Own feature recommendations and performance evaluation (accuracy comparison, profiling) for a classification pipeline, strengthening data reliability through anomaly detection and structured validation testing.

Data Science Intern — InvoLead

Feb 2025 – Aug 2025 | India

- Executed end-to-end A/B testing workflows — data cleaning, hypothesis testing, and statistical analysis — across 3+ experiments, delivering findings that informed product and business decisions.

- Automated a Quarterly Report Analysis project using Power Automate Desktop and Python, scraping and consolidating 10+ sources into structured Excel reports and dashboards — improving accuracy by 30%, surfacing trends 2x faster, and cutting manual effort by ~50%.

PROJECTS

A/B Testing & Analytics Dashboards

Python, Pandas, NumPy, Hypothesis Testing, Power BI

- Independently ran end-to-end A/B testing workflows — data cleaning, validation, and statistical hypothesis testing — and built interactive Power BI dashboards with business-aligned KPIs, translating results into recommendations adopted for product and strategy decisions.

Segmentation AI Platform

Python, FastAPI, LangChain, Qdrant, LLMs, Clustering, Prompt Engineering

- Architected backend APIs for a GenAI segmentation platform — clustering comparison, AI-generated health summaries, and a semantic-search "Ask AI" feature powered by a Qdrant vector store and RAG pipeline — enabling non-technical stakeholders to generate customer/HCP segments in natural language and reducing manual segmentation effort.

Classification AI Platform — Data Quality & Anomaly Detection

Python, FastAPI, LLMs, Feature Engineering, Model Evaluation, Anomaly Detection

- Developed classification APIs with dataset validation, anomaly detection, and feature recommendation, plus performance evaluation (accuracy comparison, profiling), improving dataset reliability and cutting manual QA effort for downstream ML workflows.

Unified — Conversational AI Analytics Platform

Python, SQL, PostgreSQL, FastAPI, LangChain, LLMs, Azure OpenAI, AWS S3, Clustering, Feature Engineering, Schema Discovery

- Delivered the segmentation module for Unified, a conversational GenAI analytics platform that answers natural-language queries with dynamic visualizations; when a query requires segmentation, the platform triggers this module to generate and return segmented results in real time.
- Implemented the end-to-end query-driven segmentation workflow — schema discovery, feature engineering, clustering, and segmentation logic — using Python, SQL, and PostgreSQL, integrated into the platform via FastAPI backend APIs.
- Built SQL-based ETL processes for data sourcing, cleaning, and standardization to support the segmentation pipeline within the broader healthcare/pharma analytics platform.
- Gained hands-on exposure to Azure OpenAI and AWS S3 for GenAI integration and data storage as part of the segmentation workflow.
- Delivered the core segmentation capability powering the platform's natural-language, query-driven segment generation, reducing manual analysis effort.

CERTIFICATIONS & WORKSHOPS

- IoT and AI-ML Workshop — hands-on prototype development integrating IoT sensors with ML inference pipelines.
- Deloitte Bridge Session — industry insights on tech consulting and enterprise data transformation.
